Health-related pest control

We are in business to provide you with the pest control services that will keep you

"safe at home"

These services include:

- Tick control
- Lawn insect control
- Mosquito control
- Wasp and hornet control
- Wood destroying insect control
- Weed control
- Aquatic weed control
- Accurate tick identifications
- Public speaking

Locally owned and operated, we have 40 years of experience in public health and insect management.

We are fully insured, and licensed by the Pennsylvania Department of Agriculture.

With governmental programs cutting funding – and closing down completely – it's time to take action to protect your home, your family and your pets.

TICK CONTROL

Ticks are Mother Nature's ninjas. They can crawl up your body totally undetected. They will attach and drink your blood without you noticing. Unfortunately, while they are dining, they are also sharing chemicals and pathogens with you. These include (but are not limited to) Lyme disease, Ehrlichiosis, Babesia, Bartonella and Rocky Mountain spotted fever. Your pets can also get some of these diseases.

The best way to avoid tick-borne diseases is to keep ticks from ever biting you. We use a product that is safe for your family, your pets, and all wildlife – except what's bugging you!!

LAWN INSECT CONTROL

Our tick product is labeled to control many other pests, including **fleas**, ants, millipedes, centipedes, and many lawn pests. Our clients have even reported seeing fewer mosquitoes after a tick treatment as well.

MOSQUITO CONTROL

If ticks are Mother Nature's ninjas, then mosquitoes are her vampires. Quick and stealthy, they attack while you are walking, sleeping, eating, or doing almost any activity.

Like ticks, they share chemicals and pathogens while taking their meal (your blood) and can give you diseases like West Nile Virus, and can give your pet dog heartworm.

Mosquitoes require standing water to breed, so a careful survey of your property (and the surrounding area) can usually pinpoint the source of your mosquito problem. Then we can take measures to solve it for you, often without any chemicals at all.

WASP & HORNET CONTROL

Why wait until someone is stung? Call today to have that wasp nest sprayed and removed by a professional.

WOOD-DESTROYING INSECT CONTROL

Protect your most valuable material possession, your house, from wood-destroying insects like carpenter bees, carpenter ants, and wood-destroying beetles.

Don't wait until major damage is done! Call for an inspection and an estimate.
